

HPS-M -2

Differential pressure transmitter, PoM

The HPS-M -2 series are differential pressure transmitters, which are equipped with a fully digital pressure transducer designed for a wide range of applications. Air velocity readout is available by connecting an external Pitot tube connection set. They are Power over Modbus supplied and parameters are accessible via Modbus RTU (3SModbus software or Sensistant).

Key features

- Built-in digital high resolution differential pressure sensor
- RJ45 connector on the PCB
- Air velocity can be measured via Modbus RTU (by using an external PSET-PTX-200 Pitot tube connection set)
- · Variety of operating ranges
- Selectable response time: 0,1-10 s
- Implemented K-factor
- \bullet Differential pressure, volume flow $^{\!(1)}$ or air velocity $^{\!(2)}$ readout via Modbus RTU
- · Selectable minimum and maximum operating ranges
- Modbus registers reset function (to factory pre-set values)
- Four LED indicators for the status of the transmitter and the controlled values
- Modbus RTU communication
- Sensor calibration procedure via tact switch or Modbus RTU
- Aluminium pressure connection nozzles

Article codes				
	Operating ranges	Imax	Connections	
HPS-M-1K0-2	0—1.000 Pa			
HPS-M-2K0-2	0—2.000 Pa	40 mA	RJ45 connector on the PCB	
HPS-M-4K0-2	0-4.000 Pa	40 MA		
HPS-M-10K-2	0—10.000 Pa			

	Techr	ical specifications				
Power supply		24 VDC (Power over Modbus)				
Output		Modbus RTU (RS485)				
		Differential pressure				
Operating modes		Volume flow				
		Air velocity				
Accuracy		±2 % of the operating range				
Protection standard		IP65 (according to EN 60529)				
Enclosure		ASA, grey (RAL9002)				
Ambient conditions	Temperature	-5—65 °C				
Ambient conditions	Rel. humidity	< 95 % rH (non-condensing)				

Area of use

- Differential pressure, air velocity $^{\!\scriptscriptstyle (1)}$ or volume flow $^{\scriptscriptstyle (2)}$ measurement in HVAC applications
- Overpressurizing applications: clean rooms to avoid particle contamination or staircases for fire safety
- \bullet Underpressurizing applications: restaurant kitchens and biohazard laboratories
- \bullet Volume flow application: ensuring the minimum legal ventilation rate (m $^3/h)$ for buildings

Standards

- EMC Directive 2014/30/EC:
- EN 61326-1:2013 Electrical equipment for measurement, control and laboratory use EMC requirements Part 1: General requirements
- EN 61326-2-3:2013 Electrical equipment for measurement, control and laboratory use - EMC requirements - Part 2-3: Particular requirements. Test configuration, operational conditions and performance criteria for transducers with integrated or remote signal conditioning
- WEEE Directive 2012/19/EC
- RoHs Directive 2011/65/EC

Modbus registers

The Sensistant Modbus configurator allows you to easily monitor and/or configure Modbus parameters.

The parameters of the unit can be monitored / configured through the 3SModbus software platform. You can download it from the following link: https://www.sentera.eu/en/3SMCenter

For more information about the Modbus registers, please refer to the product Modbus Register Map.

Wiring and connections 24 VDC Supply voltage 24 VDC GND Ground A Modbus RTU communication, signal A /B Modbus RTU communication, signal /B

⁽¹⁾ Only when K-factor of fan / drive is known. If K-factor is unknown, volume flow can be calculated via multiplying the duct cross-sectional area (A) by air velocity (V) using the formula: Q = A * V.

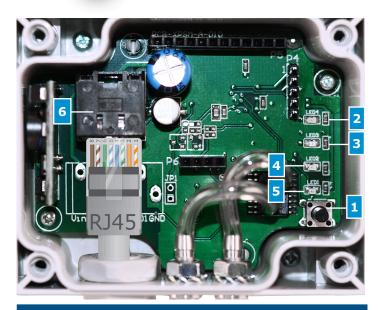

⁽²⁾ By using an external PSET-PTX-200 Pitot tube connection set

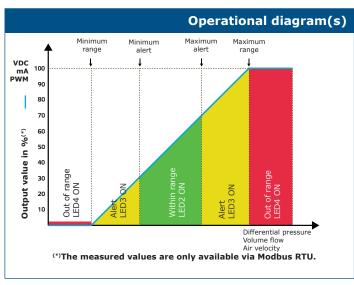

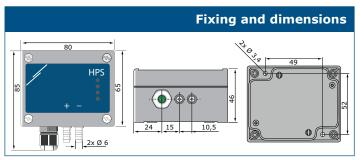

HPS-M -2

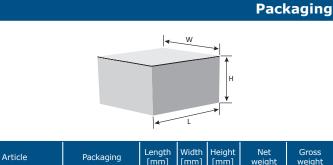

Differential pressure transmitter, PoM

Application 1: Measuring differential pressure [Pa] using PSET-PVC

Application 3: Measuring differential pressure [Pa] or volume flow [m³/h] using PSET-PVC
