

Solution details		Sentera products	
The fan speed can be manually controlled via the SPV-8-010-CP potentiometer or modbus RTU communication. The output range is adjustable via Modbus RTU. The minimum output value can be adjusted between 0 to 40 %. The maximum output value can be adjusted between 60 to 100 %. Dry contact output that can be used to enable / disable the motor. Suited for motor type: 230 VAC EC motor with 0-10 VDC , 0-20 mA or 0-100 % PWM control input. Motor control: Manual via SPV-8-010-CP potentiometer		Article code	Description
		SPV-8-010-CP	Fan control potentiometer
		External products	
		EC fan with 0-10 VDC, 0-20 mA or 0-100 % PWM control	

 Consult the fan manufacturer for the correct wiring
